Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

; Patent No. 6818444
; GENERAL INFORMATION:
;  APPLICANT: Wonderling, Ramani S.
;  APPLICANT:  Boroughs, Karen L.
;  TITLE OF INVENTION: CANINE AND FELINE PROTEINS, NUCLEIC ACID MOLECULES AND USES
;  TITLE OF INVENTION:  THEREOF
;  FILE REFERENCE: IM-5
;  CURRENT APPLICATION NUMBER: US/09/917,265A
;  CURRENT FILING DATE:  2001-07-27
;  PRIOR APPLICATION NUMBER: 60/223,016
;  PRIOR FILING DATE: 2000-08-04
;  NUMBER OF SEQ ID NOS: 111
;  SOFTWARE: PatentIn version 3.2
; SEQ ID NO 48
;   LENGTH: 666
;   TYPE: DNA
;   ORGANISM: Canis familiaris

/clone_lib="UI-R-C0"
/note="Vector: pT7T3D-PacI; Site_1: Not I; Site_2: Eco RI; The UI-R-C0 library is a subtracted library derived from the UI-R-A1 and UI-R-E1 libraries. The UI-R-A1 library consisted of a mixture of individually tagged normalized libraries constructed from rat placenta, adult lung, brain, liver, kidney, heart, spleen, ovary, and muscle. The UI-R-E1 library consisted of a mixture of individually tagged normalized libraries constructed from 8, 12 and 18-day embryo. The tag is a string of 3-5 nucleotides present between the Not I site and the oligo-dT track which allows identification of the library of origin of a clone within the mixture. The subtracted library (UI-R-C0) was constructed as follows: PCR amplified cDNA inserts from a pool of UI-R-A1 and UI-R-E1 clones from which 3' ESTs had been derived was used as a driver in a hybridization with the pooled UI-R-A1 and UI-R-E1 library in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into DH10B bacteria (Life Technologies) to generate the UI-R-C0 library. This procedure has been previously described (Bonaldo, Lennon and Soares, Genome Research 6: 791-806, 1996)"

                    /note="Vector: PWD42nv; Purified genomic DNA from M.
                    musculus C57BL/6J (male) was obtained  from the Jackson
                    Laboratory Mouse DNA Resource
                    (http://www.jax.org/resources/documents/dnares/). The DNA
                    was hydrodynamically sheared by repeated passage through a
                    0.005 inch orifice at constant velocity. The sheared DNA
                    was blunt end-repaired with T4 DNA polymerase and T4
                    polynucleotide kinase. Adaptor oligonucleotides were
                    ligated to the blunt ends in high  molar excess. The
                    adaptored DNA was purified and size-selected for a 9.5 to
                    10.5 kb range using preparative agarose gel
                    electrophoresis. Vector DNA was prepared from a derivative
                    of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                    inducible derivative of plasmid R1. The vector was ligated
                    with adaptors complementary to the insert adaptors and
                    purified. The sheared, adaptored mouse DNA was annealed to
                    adaptored vector DNA, and transformed into
                    chemically-competent E. coli XL10-Gold (Stratagene) cells
                    and selected for ampicillin resistance."

            Insert Length: 10000   Std Error: 0.00
            Plate: 0089  row: I  column: 12
            Seq primer: CGTTGTAAAACGACGGCCAGT
            Class: plasmid ends
            High quality sequence stop: 131.
FEATURES             Location/Qualifiers
     source          1. .131
                     /organism="Mus musculus"
                     /mol_type="genomic DNA"
                     /strain="C57BL/6J"
                     /db_xref="taxon:10090"
                     /clone="UUGC2M0089I12"
                     /sex="Male"
                     /lab_host="E. Coli strain XL10-Gold, T1-resistant, F-"
                     /clone_lib="Mouse 10kb plasmid UUGC1M library"
                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
                     adaptored DNA was purified and size-selected for a 9.5 to
                     10.5 kb range using preparative agarose gel
                     electrophoresis. Vector DNA was prepared from a derivative
                     of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                     inducible derivative of plasmid R1. The vector was ligated
                     with adaptors complementary to the insert adaptors and
                     purified. The sheared, adaptored mouse DNA was annealed to
                     adaptored vector DNA, and transformed into
                     chemically-competent E. coli XL10-Gold (Stratagene) cells
                     and selected for ampicillin resistance."

                     Arabidopsis thaliana,  Columbia Col-0, at 4 - 7 weeks.
                     Plants were grown in 1:1:1 peat  moss/vermiculite/perlite
                     soil at 22 deg. C +/- 3 deg. C under constant light,  and
                     watered with fertilizer. cDNA synthesis was initiated
                     using a NotI-oligo(dT)  primer. Double-stranded cDNA was
                     blunted, ligated to SalI adaptors, digested with  NotI,
                     size-selected, and cloned into the NotI and SalI sites of
                     the pSPORT vector."

                     /clone_lib="Arabidopsis ag-1 35S:AG-GR forward subtraction
                     library"
                     /note="Vector: The pT-Adv vector in the AdvanTAge Cloning
                     Kit(CLONETECH); Subtractive library constructed using the
                     CLONTECH PCR-select cDNA subtraction kit. Transgenic
                     plants homozygous for the ag-1 mutation and carrying a
                     35S:AG-GR construct were generated. RNA was isolated from
                     inflorescences with floral meristems and unopened floral
                     buds and without open or older flowers from transgenic
                     plants that were treated with dexamethasone for 3 days,
                     and used for synthesis of the tester cDNA. RNA from the
                     inflorescences of transgenic plants treated with a control
                     solution without dexamethasone was used to synthesize the
                     driver cDNA. It was observed that a 3-day treatment with
                     dexamethasone can induce anther and carpel characteristics
                     in the flowers of the ag-1 35S:AG-GR plants."

           RNA prepared and library constructed by W. Walter Lorenz (School of
           Forest Resources, University of Georgia); plant material prepared
           by Craig Zimmermann (School of Forest Resources, University of
           Georgia) using rooted cuttings provided by the Forest Biology
           Research Cooperative (FBRC) and the CCLONES project a the
           University of Florida; sequencing done in the Laboratory for
           Genomics and Bioinformatics, University of Georgia. Sequence ends
           have been trimmed to exclude vector and regions below Phred quality
           16. Three-prime sequences are presented as their reverse complement
           and have been trimmed to exclude polyA.
           Seq primer: M13-21 (TGTAAAACGACGGCCAGT)
           POLYA=Yes.

                     /clone="RTS1_25_A01_A029"
                     /lab_host="DH10B-T1 phage-resistant E. coli"
                     /clone_lib="Roots minus sulfur"
                     /note="Organ: Root; Vector: pSL1180; Site_1: EcoRI;
                     Site_2: XhoI; The library was prepared from polyA+ RNA
                     from the roots of 1-year-old loblolly pine (Pinus taeda)
                     cuttings that were rooted and then planted in washed sand.
                     The rooted cuttings were maintained for 136 days (July 25
                     2003 harvest) under ambient conditions in a local
                     greenhouse. They were kept on a weekly regimen of 0.5x
                     nutrient-complete Hoagland's solution and supplemented
                     with additional water sufficient to maintain a 15% soil
                     moisture content. Starting five weeks prior to harvesting
                     roots for mRNA preparation, the weekly fertilizer regimen
                     for the potted trees was modified to omit sulfur from the
                     0.5x Hoagland's solution (5 applications). For two days
                     prior to starting the modified fertilizer regimen, pots
                     were flushed extensively with water to reduce residual
                     levels of sulfur. Double-stranded cDNA was cloned
                     unidirectionally into pSL1180. Inserts can be excised with
                     EcoRI (5' end) and XhoI (3' end)."

           This sequence is from a Xenopus Gene Collection (XGC) library
           constructed by Nigel Garrett.
           cDNA was oligo dT primed from 5ug of poly A+ RNA from tadpole
           embryos. EcoRI-NotI cut cDNA was then ligated into pCS107 with
           EcoRI at the 5' end and NotI at the 3' end.
           Vector: pCS107; Site_1: EcoRI; Site_2: NotI
           Host: Escherichia coli DH10B.

           Clone Distribution: I.M.A.G.E. Consortium/LLNL:
           http://image.llnl.gov
           Naming Conventions: EST name is generated by the concatenation of
           the JGI Clone Id and the direction of sequencing. The suffix '.rev'
           indicates a reverse sequencing read of the insert. It does not
           necessarily reflect the orientation of the insert.
           Poly-A: Based upon the presence of a run of 14 or more T residues
           at the beginning of the sequence, this clone was polyadenylated.
           The resulting Poly-T sequence has been removed.

                    /organism="Mus musculus"
                    /mol_type="genomic DNA"
                    /strain="C57BL/6J"
                    /db_xref="taxon:10090"
                    /clone="UUGC1M0583I18"
                    /sex="Male"
                    /lab_host="E. Coli strain XL10-Gold, T1-resistant, F-"
                    /clone_lib="Mouse 10kb plasmid UUGC1M library"
                    /note="Vector: PWD42nv; Purified genomic DNA from M.
                    musculus C57BL/6J (male) was obtained  from the Jackson
                    Laboratory Mouse DNA Resource
                    (http://www.jax.org/resources/documents/dnares/). The DNA
                    was hydrodynamically sheared by repeated passage through a
                    0.005 inch orifice at constant velocity. The sheared DNA
                    was blunt end-repaired with T4 DNA polymerase and T4
                    polynucleotide kinase. Adaptor oligonucleotides were
                    ligated to the blunt ends in high  molar excess. The
                    adaptored DNA was purified and size-selected for a 9.5 to
                    10.5 kb range using preparative agarose gel
                    electrophoresis. Vector DNA was prepared from a derivative
                    of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                    inducible derivative of plasmid R1. The vector was ligated
                    with adaptors complementary to the insert adaptors and
                    purified. The sheared, adaptored mouse DNA was annealed to
                    adaptored vector DNA, and transformed into
                    chemically-competent E. coli XL10-Gold (Stratagene) cells
                    and selected for ampicillin resistance."

                     M13 Forward and reverse primers ; Library Amplified ;
                     Recombinants (inserts): 98% ; Library complexity: 5x106 ;
                     Full-length construction (method): SMART, a Clontech
                     method The pooled tissue RNA was collected and used to
                     construct full length enriched cDNA library and also
                     served as template to synthesize complex first strand cDNA
                     probe. Two high density colony arrays were made from over
                     110K cDNA clones and hybridized with the probes. Low
                     intensity clones were selected as they represented rare
                     expressed clones. The hybridization intensities for all
                     clones span from 0 to 1.8 million counts and the low
                     abundant class ranged from 0 to 13,000."

            Computer-based methods for the mouse full-length cDNA
           encyclopedia: real-time sequence clustering for construction of a
           nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)
            cDNA library was prepared and sequenced in Mouse Genome
           Encyclopedia Project of Genome Exploration Research Group in Riken
           Genomic Sciences Center and Genome Science Laboratory in RIKEN.
           Division of Experimental Animal Research in Riken contributed to
           prepare mouse tissues.
            Please visit our web site (http://genome.gsc.riken.go.jp) for
           further details.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Claim 23; SEQ ID NO 101; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline N-terminal single chain IL-12p35 subunit
CC   protein encoding cDNA.

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Disclosure; SEQ ID NO 103; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline N-terminal single chain IL-12p35 subunit
CC   protein complementary DNA.

CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Example 3; SEQ ID NO 34; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain IL-12p35 subunit full-length
CC   complementary DNA.

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Claim 24; SEQ ID NO 43; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain IL-12 protein encoding cDNA.

C The present invention discloses new feline interleukin 18 (IL-18), feline
C caspase-1, feline IL-12 single chain and canine IL-12 single chain
C proteins. A composition comprising a feline IL-18, feline caspase-1,
C feline IL-12 single chain or canine IL-12 single chain proteins, a
C nucleic acid encoding these proteins, mimetopes of these proteins,
C multimeric forms of these proteins, an antibody against these proteins,
C or an inhibitor identified by its ability to inhibit the activity of
C these proteins, can be used to treat or prevent autoimmune diseases,
C allergic reactions, infectious diseases, tumour development, inflammatory
C diseases and/or graft rejection in animals. The present nucleic acid
C sequence represents a feline interleukin 12 DNA sequence, as described in
C the invention

T   New nucleic acid molecule comprising a sequence encoding a feline p35 or
T   p40 subunit protein and a nucleic acid linker, useful in preparing a
T   vaccine against infectious diseases in feline animals.
XX
PS   Example 3; SEQ ID NO 40; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain IL-12 complementary DNA.

PT   Recombinant feline interleukin-12, useful as immunostimulant and for
PT   treating e.g. viral infections in cats, and related nucleic acid
PT   constructs.
CX
PS   Disclosure; Fig 2; 35pp; German.
CX
CC   This invention describes a novel feline interleukin-12 (fIL-12)
CC   polypeptide (I) that is expressed, by recombinant gene expression in
CC   eukaryotic or prokaryotic cells, in the form of both polypeptide chains
CC   of subunits p35 and p40. These proteins are formed so that, in equimolar
CC   concentrations and in presence of an immunizing antigen, they can be
CC   administered to carnivores, particularly domestic cats. The invention
CC   also describes a nucleic acid construct (II) encoding fIL-12 containing
CC   sequences at least 95% identical with the p40- and p35-encoding sequences
CC   (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
CC   as immunostimulants for immunization against infectious diseases and/or
CC   for treating infections or tumors in felines, especially domestic cats.
CC   The products of the invention have immunostimulatory, antiviral and
CC   antitumor activity. Nucleic acid constructs that encode (II) are useful
CC   as adjuvants for prophylactic immunization against viral diseases and for
CC   treating diseases associated with a Th1 defect. IL-12 induces synthesis
CC   of interferon gamma (Th1 response). The feline interleukin-12 polypeptide
CC   is useful for carnivores, and particularly domestic cats in the
CC   following: (i) as immunostimulant, for preventative or therapeutic use;
CC   and (ii) treating tumors and autoimmune diseases, or diseases associated
CC   with a Th1 defect, especially pre-existing infections by feline immune
CC   deficiency virus (FIV), feline leukemia virus and corona virus

X
C   This invention describes a novel feline interleukin-12 (fIL-12)
C   polypeptide (I) that is expressed, by recombinant gene expression in
C   eukaryotic or prokaryotic cells, in the form of both polypeptide chains
C   of subunits p35 and p40. These proteins are formed so that, in equimolar
C   concentrations and in presence of an immunizing antigen, they can be
C   administered to carnivores, particularly domestic cats. The invention
C   also describes a nucleic acid construct (II) encoding fIL-12 containing
C   sequences at least 95% identical with the p40- and p35-encoding sequences
C   (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
C   as immunostimulants for immunization against infectious diseases and/or
C   for treating infections or tumors in felines, especially domestic cats.
C   The products of the invention have immunostimulatory, antiviral and
C   antitumor activity. Nucleic acid constructs that encode (II) are useful
C   as adjuvants for prophylactic immunization against viral diseases and for
C   treating diseases associated with a Th1 defect. IL-12 induces synthesis
C   of interferon gamma (Th1 response). The feline interleukin-12 polypeptide
C   is useful for carnivores, and particularly domestic cats in the
C   following: (i) as immunostimulant, for preventative or therapeutic use;
C   and (ii) treating tumors and autoimmune diseases, or diseases associated
C   with a Th1 defect, especially pre-existing infections by feline immune
C   deficiency virus (FIV), feline leukemia virus and corona virus

PT  Vaccine for treating or preventing lentivirus infection in cats, contains
PT  nucleic acid sequence encoding viral protein under control of eukaryotic
PT  promoter.
XX
PS  Claim 14; Page 37; 37pp; German.
XX
CC  This invention describes a novel vaccine (A) for prevention or treatment
CC  of lentivirus infection in felines which comprises an immunizing nucleic
CC  acid sequence (I) that contains, or comprises, at least part of a gene
CC  encoding a protein (II) of the virus, under control of a eukaryotic
CC  promoter functional in the relevant animal. (II) is especially the
CC  envelope (env) protein. The invention also describes (1) vaccine (A)
CC  containing an immunizing protein, or fragment, from a lentivirus plus at
CC  least one of interleukin (IL)-12 and/or -16; and (2) preparation of a
CC  lentivirus protein, or fragment, especially derived from feline immune
CC  deficiency virus (FIV), by expressing the corresponding nucleic acid
CC  sequence in a host cell. The products of the invention have antiviral
CC  activity. The vaccine (A) and related protein-based vaccines, are
CC  particularly used to treat or prevent lentivirus infections in domestic
CC  cats, especially feline immune deficiency virus (FIV). Vaccination with
CC  (A) allows differentiation between vaccinated and infected animals, from
CC  the antibody status. The vaccines may be formulated with an adjuvant
CC  (particularly interleukin-12 and/or IL-16) that elicits a cytotoxic
CC  immune response, particularly a Th1 response

CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a canine interleukin 12 DNA sequence, as described in
CC   the invention

:C   The present invention discloses new feline interleukin 18 (IL-18), feline
:C   caspase-1, feline IL-12 single chain and canine IL-12 single chain
:C   proteins. A composition comprising a feline IL-18, feline caspase-1,
:C   feline IL-12 single chain or canine IL-12 single chain proteins, a
:C   nucleic acid encoding these proteins, mimetopes of these proteins,
:C   multimeric forms of these proteins, an antibody against these proteins,
:C   or an inhibitor identified by its ability to inhibit the activity of
:C   these proteins, can be used to treat or prevent autoimmune diseases,
:C   allergic reactions, infectious diseases, tumour development, inflammatory
:C   diseases and/or graft rejection in animals. The present nucleic acid
:C   sequence represents a canine interleukin 12 DNA sequence, as described in
:C   the invention

T   New nucleic acid molecule comprising a sequence encoding a feline p35 or
T   p40 subunit protein and a nucleic acid linker, useful in preparing a
T   vaccine against infectious diseases in feline animals.
X
S   Example 4; SEQ ID NO 46; 103pp; English.
X
C   The present invention relates to the feline interleukin (IL)-12p35 or p40
C   subunit protein and their encoding nucleic acid molecules and a nucleic
C   acid linker. The invention also provides the feline caspase (casp)-1,
C   feline IL-18 single chain and canine IL-12 single chain proteins and
C   their nucleic acid molecules. The nucleic acid molecule is useful in
C   preparing a vaccine against infectious diseases in feline animals. The
C   present sequence is the canine single chain IL-12p35 subunit protein
C   encoding full-length cDNA.

XX
CC   The present sequence encodes canine interleukin-12 (IL-12). The
CC   specification describes a method for the prevention and treatment of dog
CC   and cat immune diseases. The treatment used an agent comprising dog IL-12
CC   (CaIL12) proteins to form a heterodimer. The agent is useful for
CC   preventing and treating dog and cat immune diseases, including tumours,
CC   skin diseases, infectious diseases and allergic diseases

PT  Large scale production of interleukin-12 for pharmaceutical applications,
PT  comprises infecting an insect cell with a recombinant virus containing
PT  gene encoding IL-12, and producing IL-12 by carrying out spinner culture
PT  of insect cell.
```

```
XX
DS   Example; SEQ ID NO 6; 8pp; Japanese.
XX
CC   The invention related to the large scale production of interleukin-12 (IL
CC   -12), which involves infecting an insect cell with a recombinant virus
CC   containing a gene encoding IL-12, and producing IL-12 by carrying out
CC   spinner culture of insect cell. The method is useful for producing IL-12,
CC   preferably canine IL-12. IL-12 has pharmaceutical applications. The
CC   present sequence encodes canine IL-12 P35, which is used in the
CC   exemplification of the present invention.

PT   Canine cytokine protein which activates canine cytotoxic T lymphocytes -
PT   is useful for treatment of viral and autoimmune diseases in dogs.
XX
PS   Claim 8; Page 33-34; 51pp; Japanese.
XX
CC   This sequence encodes the canine lymphocyte activation factor (CLAF) of
CC   the invention. CLAF activates lymphocytes, especially canine cytotoxic T
CC   cells. The protein contains a p35 and a p40 subunit. CLAF or antibodies
CC   recognising it may be used in the treatment of viral diseases in dogs
CC   (such as canine distemper, canine parvovirus and canine infectious
CC   hepatitis). The antibodies may also be used in isolation of CLAF from
CC   culture of the transformant host cells by affinity chromatography. The
CC   p40 homodimer can be used for the treatment of autoimmune diseases in
CC   dogs

CC  The present invention discloses new feline interleukin 18 (IL-18), feline
CC  caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC  proteins. A composition comprising a feline IL-18, feline caspase-1,
CC  feline IL-12 single chain or canine IL-12 single chain proteins, a
CC  nucleic acid encoding these proteins, mimetopes of these proteins,
CC  multimeric forms of these proteins, an antibody against these proteins,
CC  or an inhibitor identified by its ability to inhibit the activity of
CC  these proteins, can be used to treat or prevent autoimmune diseases,
CC  allergic reactions, infectious diseases, tumour development, inflammatory
CC  diseases and/or graft rejection in animals. The present nucleic acid
CC  sequence represents a canine interleukin 12 DNA sequence, as described in
CC  the invention

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Example 4; SEQ ID NO 66; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the canine single chain IL-12 protein encoding cDNA.

T   Novel gene vector for expression in insect useful for expression of
T   foreign gene such as dog interleukin 12 gene, comprises two promoters.
X
S   Claim 4; SEQ ID NO 8; 13pp; Japanese.
X
C   The invention relates to a novel gene vector for expression in an insect
C   comprising at least two promoters, particularly the polyhedrin promoter
C   and p10 promoter. The vector contains at least two types of foreign
C   protein expression gene and the gene product of the vector is produced
C   using a gene recombinant baculovirus, particularly a recombinant silkworm
C   nuclear polyhedrosis virus. The baculovirus is proliferated in a
C   silkworm. The vector of the invention may be useful for expression of a
C   foreign gene, such as canine interleukin 12. Within the vector, two types
C   of foreign protein expression genes are integrated simultaneously for
C   their simultaneous expression. The current sequence is that of the canine
C   interleukin-12 (IL-12) p35 DNA of the invention.

PT   Nucleic acid encoding ovine interleukin-5 or -12 - used as vaccine
PT   adjuvants and to treat or prevent microbial infections in livestock.
XX
PS   Claim 8; Page 43-44; 78pp; English.
XX
CC   The sequences given in AAT50757-59 encode ovine interleukin-12 (IL-12) 35
CC   kD subunit (partial and full length sequence) and the 40 kD subunit.
CC   Ovine IL-5 or IL-12 are used to treat and/or prevent infections in
CC   livestock (esp. cows and sheep), particularly where the animals are
CC   stressed, e.g. during transport. IL-5 and IL-12 can also be used as
CC   adjuvants in vaccines for veterinary use (partic. weakly immunogenic
CC   subunit or synthetic peptide vaccines). They may also be used to treat
CC   cancer, immunosuppression and allergy, to enhance/suppress the
CC   reproductive system and to promote growth or early maturity. Optionally
CC   interleukin can be delivered from constructs or delivery cells and
CC   antibodies are useful in enzyme immunoassays for rapid diagnosis of
CC   infection. The interleukins are immunopotentiators, especially IL-5
CC   promotes growth of early haematopoietic progenitor cells and generation
CC   of cytotoxic cells from thymocytes, also it stimulates production and
CC   secretion of IgM and IgA (in synergism with bacterial endotoxin). IL-12
CC   induces production of gamma-interferon by, and proliferation of, T and NK
CC   cells and increases the (non-)specific cytolytic lymphocyte response. The
CC   genetic constructs can also be used for in vitro production of IL-5 or -
CC   12. (Updated on 17-OCT-2003 to standardise OS field)

PT   Preparation of bovine interleukin 12 comprising using a vector containing
PT   the gene encoding it, useful for the prevention and treatment of chronic
PT   and opportunistic infections.
XX
PS   Example 1; Page 8-9; 11pp; Japanese.
XX
CC   The invention relates to a method for the preparation of bovine
CC   interleukin 12 (BoIL12). BoIL12 consists of a heterodimer of p35 and p40
CC   subunits. BoIL12 is produced by introducing into a host cell, recombinant
CC   vectors containing genes encoding the p35 and p40 subunits. This sequence
CC   represents the coding region for the bovine IL12 p35 subunit. Interleukin
CC   12 is used for the prevention and treatment of chronic infections and
CC   opportunistic infections

PS   Claim 7; SEQ ID NO 3488; 145pp; English.
XX
CC   The invention relates to a novel method for identifying an individual who
CC   has an altered risk for developing myocardial infarction. The method
CC   comprises detecting a single nucleotide polymorphism (SNP) in any one of
CC   the nucleotide sequences given in the specification in the individual's
CC   nucleic acids, where the presence of the SNP is correlated with an
CC   altered risk for myocardial infarction in the individual. The invention
CC   further comprises: an isolated nucleic acid molecule comprising at least
CC   8 contiguous nucleotides where one of the nucleotides is an SNP given in
CC   the specification or its complement and encoding any one of the amino
CC   acid sequences given in the specification; an isolated polypeptide
CC   comprising an amino acid sequence given in the specification; an antibody
CC   that specifically binds to the polypeptide or its antigen-binding
CC   fragment; an amplified polynucleotide containing an SNP given in the
CC   specification and which is between about 16 and 1000 nucleotides in
CC   length; a kit for detecting an SNP in a nucleic acid, comprising the
CC   polynucleotide, a buffer and an enzyme; a method of detecting an SNP in a
```

```
:C   nucleic acid molecule; a method of detecting a variant polypeptide; and a
:C   method for identifying an agent useful in treating or preventing
:C   myocardial infarction. The novel detection method has cardiant activity.
:C   The nucleic acids of the invention may be used in gene therapy. The
:C   method is useful in identifying an individual who has an increased or
:C   decreased risk for developing myocardial infarction and for preparing a
:C   composition for treating or preventing myocardial infarction. This
:C   polynucleotide sequence represents a transcript-based context sequence
:C   which flanks an SNP found in a human myocardial infarction-associated
:C   gene of the invention. Note: This sequence was not shown in the
:C   specification. The sequence has come from an electronic sequence listing
:C   downloaded from the WIPO website.

PT  Identifying an individual who has an altered risk for developing
PT  myocardial infarction by detecting a single nucleotide polymorphism in
PT  the individual's nucleic acids.
XX
PS  Claim 7; SEQ ID NO 3492; 145pp; English.
XX
CC  The invention relates to a novel method for identifying an individual who
CC  has an altered risk for developing myocardial infarction. The method
CC  comprises detecting a single nucleotide polymorphism (SNP) in any one of
CC  the nucleotide sequences given in the specification in the individual's
CC  nucleic acids, where the presence of the SNP is correlated with an
CC  altered risk for myocardial infarction in the individual. The invention
CC  further comprises: an isolated nucleic acid molecule comprising at least
CC  8 contiguous nucleotides where one of the nucleotides is an SNP given in
CC  the specification or its complement and encoding any one of the amino
CC  acid sequences given in the specification; an isolated polypeptide
CC  comprising an amino acid sequence given in the specification; an antibody
CC  that specifically binds to the polypeptide or its antigen-binding
CC  fragment; an amplified polynucleotide containing an SNP given in the
CC  specification and which is between about 16 and 1000 nucleotides in
CC  length; a kit for detecting an SNP in a nucleic acid, comprising the
CC  polynucleotide, a buffer and an enzyme; a method of detecting an SNP in a
CC  nucleic acid molecule; a method of detecting a variant polypeptide; and a
CC  method for identifying an agent useful in treating or preventing
CC  myocardial infarction. The novel detection method has cardiant activity.
CC  The nucleic acids of the invention may be used in gene therapy. The
CC  method is useful in identifying an individual who has an increased or
CC  decreased risk for developing myocardial infarction and for preparing a
CC  composition for treating or preventing myocardial infarction. This
CC  polynucleotide sequence represents a transcript-based context sequence
CC  which flanks an SNP found in a human myocardial infarction-associated
CC  gene of the invention. Note: This sequence was not shown in the
CC  specification. The sequence has come from an electronic sequence listing
CC  downloaded from the WIPO website.

CX
CC   The invention relates to a protein which comprises a cytotoxic lymphocyte
CC   maturation factor (CLMF). The protein is useful for stimulating activated
CC   T-cells which involves treating T-cells with the protein. The method
CC   further involves treating the activated T-cells with IL2 or its
CC   biologically active fragment. The protein is useful for stimulating
CC   natural killer cells which involves treating the natural killer cells
CC   with the protein. The protein has immunoenhancing and antitumour effects
CC   when used as single therapeutic agent in vivo. The present sequence is
CC   used in the exemplification of the present invention.

XX
CC   AAQ97484 and AAQ97485 are from human lymphoblast cell line RMPI 8866. IL-
CC   12 is a heterodimeric cytokine which was originally identified as a
CC   factor which induces gamma-interferon from T cells and natural killer
CC   cells as set forth in PCT/US91/06332, published April 2 1992, and
CC   incorporated by reference. EP 433827, published June 26 1991, disclosed
CC   IL-12 as a cytotoxin lymphocyte maturation factor. In the patent, IL-12
CC   is defined as a heterodimeric glycoprotein comprised of two covalently
CC   linked subunits having mol. wts of about 40 kD and 35 kD. The two
CC   subunits may be disulfide-bonded. IL-12 is administered to prevent or
CC   ameliorate GVHD. Dosage is 1 ng-0.1 mg (esp. 1.0 ng-1 microg)/kg daily
CC   for 3 days, the first dose given 1 hr. after transplant. IL-12 can be
CC   used as the native heterodimer or as subunits. (Updated on 25-MAR-2003 to
CC   correct PN field.)

X
C   The invention relates to a method for the treatment or prevention of
C   graft-versus-host disease (GVHD) which comprises the administration of
C   interleukin-12 (IL-12) at the time of bone-marrow transplantation to
C   maintain or promote graft-versus-leukaemia effects. Preferably, dosage is
CC  0.001-100 (preferably 1-100) mu g/kg for 3 days starting on the day of
CC  the bone marrow transplant. IL-12 is administered daily until there is an
CC  improvement in the condition. Administration is oral, cutaneous,
CC  subcutaneous, intravenous or by inhalation preferably subcutaneous, or
CC  intravenous. The present sequence encodes the human interleukin-12 35kDa
CC  subunit

X
C   The invention relates to nucleic acids encoding modified cytokine
C   polypeptides (i.e. modified p40 and p35 polypeptides). The modified
C   cytokine polypeptides have T-cell proliferative and interferon (IFN)-
C   gamma induction activities. The polypeptides and polynucleotides of the
C   invention are useful for treating various diseases e.g. bacterial
C   infections, AIDS, diabetic retinopathy and cancer. The polypeptide and
C   polynucleotide may also be useful as a vaccine adjuvant, to enhance a
C   vaccinated host's cell-mediated immunity for protective response to a
C   pathogen. The present sequence is human p35 protein encoding DNA

PT   New interleukin 12A (IL-12A) gene polymorphic variants, for studying the
PT   expression and function of IL-12A and screening candidate drugs for
PT   treating AIDS and cancer.
XX
PS   Claim 28; Fig 2; 72pp; English.
XX
CC   The invention comprises the amino acid and coding sequence of the human
CC   interleukin 12A (IL-12A) protein. Specifically the invention relates to
CC   the identification of polymorphisms within the human (IL-12A) gene
CC   sequence. The polymorphisms identified in the human IL-12A gene sequence
CC   are useful in studying the expression and function of IL-12A, and in
CC   screening drugs for the treatment of disorders such as AIDS, malaria,
CC   tuberculosis and cancer. The IL-12A polymorphisms may be used to
CC   haplotype and genotype the IL-12A gene of an individual. The IL-12A DNA
CC   sequences of the invention can be used to create transgenic animals for
CC   studying expression of the IL-12A isogenes in vivo. The present DNA
CC   sequence represents the coding sequence of the human interleukin 12A (IL-
CC   12A) gene

:X
:C   The invention relates to a recombinant baculovirus comprising DNA
:C   encoding human interleukin 12 (hIL-12) and methods for its preparation.
:C   The recombinant baculovirus strain is designated Autographa california
:C   nuclear polyhedrosis virus AcNPV-hIL12 (CCTCC No. 2 V200108). This strain
:C   contains two human IL-12 subunit genes, the IL-12 P35 subunit gene
:C   (ACC47589) and the IL-12 P40 subunit gene (ACC47592) which are
:C   respectively under the control of the viral polyhedrin and P10 promoters.
:C   The baculovirus can be used in the recombinant production of human IL-12
:C   which is suitable for treating tumours and bacterial, viral and other
:C   infections. The present sequence represents the human IL-12 P35 subunit
:C   gene used in construction of the baculovirus vector of the invention

PT   Recombinant feline interleukin-12, useful as immunostimulant and for
PT   treating e.g. viral infections in cats, and related nucleic acid
PT   constructs.
XX
PS   Disclosure; Fig 2; 35pp; German.
XX
CC   This invention describes a novel feline interleukin-12 (fIL-12)
CC   polypeptide (I) that is expressed, by recombinant gene expression in
CC   eukaryotic or prokaryotic cells, in the form of both polypeptide chains
CC   of subunits p35 and p40. These proteins are formed so that, in equimolar
CC   concentrations and in presence of an immunizing antigen, they can be
CC   administered to carnivores, particularly domestic cats. The invention
CC   also describes a nucleic acid construct (II) encoding fIL-12 containing
CC   sequences at least 95% identical with the p40- and p35-encoding sequences
CC   (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
CC   as immunostimulants for immunization against infectious diseases and/or
CC   for treating infections or tumors in felines, especially domestic cats.
CC   The products of the invention have immunostimulatory, antiviral and
CC   antitumor activity. Nucleic acid constructs that encode (II) are useful
CC   as adjuvants for prophylactic immunization against viral diseases and for
CC   treating diseases associated with a Th1 defect. IL-12 induces synthesis
CC   of interferon gamma (Th1 response). The feline interleukin-12 polypeptide
CC   is useful for carnivores, and particularly domestic cats in the
CC   following: (i) as immunostimulant, for preventative or therapeutic use;
CC   and (ii) treating tumors and autoimmune diseases, or diseases associated
CC   with a Th1 defect, especially pre-existing infections by feline immune
CC   deficiency virus (FIV), feline leukemia virus and corona virus

T   New expression vector comprising DNA encoding a subunit of a dimeric form
T   of interleukin under transcriptional control of an ecdysone-inducible
T   promoter, useful in preparing a composition for treating e.g.,
T   inflammatory disease.
X
S   Disclosure; Page 85-86; 87pp; English.
X
C   The present invention relates to an expression vector comprising DNA
C   encoding a subunit of a dimeric form of interleukin under transcriptional
C   control of an ecdysone-inducible promoter. The expression vector is
C   useful in preparing a composition for treating a disease having a
C   pathogenesis which includes endogenous production of cytokine IL-12, IL-
C   23 or IL-27, e.g., infectious diseases, bacterial, protozoal or virus-
C   induced inflammation, epithelial airway inflammation such as asthma,
C   allergic disease, or autoimmune disease such as multiple sclerosis or
C   inflammatory bowel disease. The present sequence is the coding sequence
C   of the human interleukin-12 alpha chain used in the exemplification of
C   the invention.

PS  Example 27; Fig 34; 232pp; English.
XX
CC  The sequences given in AAQ67879-80 are expression cassettes which contain
CC  the p40 and p35 subunits of human interleukin-12 (IL-12) under the
CC  control of the entomopox virus (EPV) promoter and the vaccinia E3L
CC  promoter, respectively. These sequences were used in the construction of
CC  an ALVAC-based recombinant virus containing the genes for the two
CC  subunits of human IL-12. The p40 subunit was amplified using primers
CC  JP202 and JP189 and placed under the control of the entomopox virus (EPV)
CC  42 kD promoter in plasmid PBSHIL12p40II. The p35 subunit was amplified
CC  using primers JP186 and JP201 and placed under the control of the
CC  vaccinia E3L promoter using primers JP218 and JP220. The expression
CC  cassette was isolated and ligated with pBSSK+ generating plasmid
CC  PBSHIL12p35II. The p35 and p40 expression cassettes were excised and
CC  assembled in pBSSK+ to give PBSHIL12 in which the two expression
CC  cassettes are orientated head-to-head relative to each other. The
CC  combination casette containing the poxvirus promoted genes for both IL-12
CC  subunits was excised from PBSHIL12 and cloned in to ALVAC C6 vector
CC  plasmid pC6L to give pC6HIL12. Recombination between this donor plasmid
CC  and ALVAC rescuing virus produced recombinant virus ALVAC+IL12, which
CC  contains both the human IL-12 genes in the C6 locus. The resulting virus
CC  may be used in a composition for inducing an antigenic or immunological
CC  response, ie. for immunisation against pathogens. (Updated on 25-MAR-2003
CC  to correct PN field.)

PT Recombinant poxviruses comprising exogenous DNA encoding antigenic
PT determinants useful in immunotherapy to immunize against cancers and
PT other diseases such as influenza, Newcastle Disease and rabies.
XX
PS Example 27; Fig 34; 163pp; English.
XX
CC The present invention describes a recombinant poxvirus (I), comprising
CC exogenous DNA encoding an antigenic determinant of a pathogen which is
CC then expressed in vivo in infected host cells after administration to a
CC patient and therefore induces an immunological response. (I) may be used
CC to vaccinate patients against a wide range of diseases and disorders
CC depending on the type of antigen encoded by the exogenous DNA. (I) may be
CC used to vaccinate against diseases such as rabies, influenza and
CC Newcastle Disease. It is particularly useful for immunising against
CC cancers. The poxvirus (I) also provides a means of manipulating
CC lymphocytes and tumour cells for use in cell-based immunotherapeutic
CC modalities for cancer. (I) also have enhanced safety compared to
CC unattenuated viruses (attenuation reduces the virulence of the viruses)
CC and known recombinant poxvirus vaccines. This increased level of safety
CC reduces the possibility of a 'runaway' infection in the host and reduces
CC the chance of transmission from vaccinated to unvaccinated individuals
CC and contamination of the environment. The present sequence represents a
CC Vaccinia E3L/human IL-12 P35 expression cassette used in the
CC exemplification of the present invention

PT exogenous DNA encoding B7 protein, useful for cancer therapy.
XX
PS Example 27; SEQ ID NO 199; 181pp; English.
XX
CC The invention describes a recombinant poxvirus containing exogenous DNA
CC in a nonessential region of the poxvirus, where the poxvirus is an
CC attenuated avipox Virus that expresses an exogenous DNA encoding
CC carcinoembryonic antigen and an exogenous DNA encoding B7 protein. Also
CC described are: a composition comprising a poxvirus above in admixture
CC with a carrier; and expressing carcinoembryonic antigen and B7 protein in
CC vivo comprising administering to a mammal the composition above.
CC Disclosed are: making recombinant poxvirus defined above; recombinant
CC poxvirus vaccine having an increased level of safety compared to known
CC recombinant poxvirus vaccines; and a modified vector for expressing a

```
C   gene product in a host. The recombinant poxvirus is useful for providing
C   a recombinant poxvirus vaccine having an increased level of safety
C   compared to known recombinant poxvirus vaccines. The recombinant poxvirus
C   is useful for cancer therapy. This sequence represents a human IL-12
C   expression cassette used in the creation of NYVAC rescue virus and
C   canarypox virus vector ALVAC comprising the human IL-12 gene.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ONSRTM NIH MGC Project
ITLE Direct Submission
OURNAL Submitted (19-MAR-2004) National Institutes of Health, Mammalian
Gene Collection (MGC), Bethesda, MD 20892-2590, USA
EMARK NIH-MGC Project URL: http://mgc.nci.nih.gov
MENT Contact: MGC help desk
Email: cgapbs-r@mail.nih.gov
Tissue Procurement: Narayan Bhat
cDNA Library Preparation: Bhat Laboratory
cDNA Library Arrayed by: The I.M.A.G.E. Consortium (LLNL)
DNA Sequencing by: Sequencing Group at the Stanford Human Genome
Center, Stanford University School of Medicine, Stanford, CA 94305
Web site: http://www-shgc.stanford.edu
Contact: (Dickson, Mark) mcd@paxil.stanford.edu
Dickson, M., Schmutz, J., Grimwood, J., Rodriquez, A., and Myers,
R. M.

Clone distribution: MGC clone distribution information can be found
through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
Series: IRAK Plate: 172 Row: d Column: 23
This clone was selected for full length sequencing because it
passed the following selection criteria: matched mRNA gi: 24497437.

Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single chain and canine IL-12 single chain proteins, useful for treating and preventing autoimmune diseases, inflammatory diseases and/or graft rejection in animals.

Example 3; Page 75-76; 106pp; English.

The present invention discloses new feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single chain and canine IL-12 single chain proteins. A composition comprising a feline IL-18, feline caspase-1, feline IL-12 single chain or canine IL-12 single chain proteins, a nucleic acid encoding these proteins, mimetopes of these proteins, multimeric forms of these proteins, an antibody against these proteins, or an inhibitor identified by its ability to inhibit the activity of these proteins, can be used to treat or prevent autoimmune diseases, allergic reactions, infectious diseases, tumour development, inflammatory diseases and/or graft rejection in animals. The present nucleic acid sequence represents a feline interleukin 12 DNA sequence, as described in the invention

CC The present invention relates to the feline interleukin (IL)-12p35 or p40

subunit protein and their encoding nucleic acid molecules and a nucleic acid linker. The invention also provides the feline caspase (casp)-1, feline IL-18 single chain and canine IL-12 single chain proteins and their nucleic acid molecules. The nucleic acid molecule is useful in preparing a vaccine against infectious diseases in feline animals. The present sequence is the feline N-terminal single chain IL-12p40 protein encoding cDNA.

CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC proteins. A composition comprising a feline IL-18, feline caspase-1,
CC feline IL-12 single chain or canine IL-12 single chain proteins, a
CC nucleic acid encoding these proteins, mimetopes of these proteins,
CC multimeric forms of these proteins, an antibody against these proteins,
CC or an inhibitor identified by its ability to inhibit the activity of
CC these proteins, can be used to treat or prevent autoimmune diseases,
CC allergic reactions, infectious diseases, tumour development, inflammatory
CC diseases and/or graft rejection in animals. The present nucleic acid
CC sequence represents a feline interleukin 12 DNA sequence, as described in
CC the invention

 PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
 PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
 PT   vaccine against infectious diseases in feline animals.
 XX
 PS   Claim 23; SEQ ID NO 29; 103pp; English.
 XX
 CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
 CC   subunit protein and their encoding nucleic acid molecules and a nucleic
 CC   acid linker. The invention also provides the feline caspase (casp)-1,
 CC   feline IL-18 single chain and canine IL-12 single chain proteins and
 CC   their nucleic acid molecules. The nucleic acid molecule is useful in
 CC   preparing a vaccine against infectious diseases in feline animals. The
 CC   present sequence is the feline single chain IL-12p40 subunit protein
 CC   encoding full-length cDNA.

New nucleic acid molecule comprising a sequence encoding a feline p35 or p40 subunit protein and a nucleic acid linker, useful in preparing a vaccine against infectious diseases in feline animals.

Example 3; SEQ ID NO 31; 103pp; English.

The present invention relates to the feline interleukin (IL)-12p35 or p40 subunit protein and their encoding nucleic acid molecules and a nucleic acid linker. The invention also provides the feline caspase (casp)-1, feline IL-18 single chain and canine IL-12 single chain proteins and their nucleic acid molecules. The nucleic acid molecule is useful in preparing a vaccine against infectious diseases in feline animals. The present sequence is the feline single chain IL-12p40 subunit full-length complementary DNA.

 Vaccine for treating or preventing lentivirus infection in cats, contains
 nucleic acid sequence encoding viral protein under control of eukaryotic
 promoter.

 Claim 14; Page 36; 37pp; German.

 This invention describes a novel vaccine (A) for prevention or treatment
 of lentivirus infection in felines which comprises an immunizing nucleic
 acid sequence (I) that contains, or comprises, at least part of a gene
 encoding a protein (II) of the virus, under control of a eukaryotic
 promoter functional in the relevant animal. (II) is especially the
 envelope (env) protein. The invention also describes (1) vaccine (A)
 containing an immunizing protein, or fragment, from a lentivirus plus at
 least one of interleukin (IL)-12 and/or -16; and (2) preparation of a
 lentivirus protein, or fragment, especially derived from feline immune
 deficiency virus (FIV), by expressing the corresponding nucleic acid
 sequence in a host cell. The products of the invention have antiviral
 activity. The vaccine (A) and related protein-based vaccines, are
 particularly used to treat or prevent lentivirus infections in domestic
 cats, especially feline immune deficiency virus (FIV). Vaccination with
 (A) allows differentiation between vaccinated and infected animals, from
 the antibody status. The vaccines may be formulated with an adjuvant
 (particularly interleukin-12 and/or IL-16) that elicits a cytotoxic
 immune response, particularly a Th1 response

Recombinant feline interleukin-12, useful as immunostimulant and for treating e.g. viral infections in cats, and related nucleic acid constructs.

Claim 3; Page 30; 35pp; German.

This invention describes a novel feline interleukin-12 (fIL-12) polypeptide (I) that is expressed, by recombinant gene expression in eukaryotic or prokaryotic cells, in the form of both polypeptide chains of subunits p35 and p40. These proteins are formed so that, in equimolar concentrations and in presence of an immunizing antigen, they can be administered to carnivores, particularly domestic cats. The invention also describes a nucleic acid construct (II) encoding fIL-12 containing sequences at least 95% identical with the p40- and p35-encoding sequences (A, 990 bp and B, 669 bp respectively), reproduced in the specification, as immunostimulants for immunization against infectious diseases and/or for treating infections or tumors in felines, especially domestic cats. The products of the invention have immunostimulatory, antiviral and antitumor activity. Nucleic acid constructs that encode (II) are useful as adjuvants for prophylactic immunization against viral diseases and for treating diseases associated with a Th1 defect. IL-12 induces synthesis of interferon gamma (Th1 response). The feline interleukin-12 polypeptide is useful for carnivores, and particularly domestic cats in the following: (i) as immunostimulant, for preventative or therapeutic use; and (ii) treating tumors and autoimmune diseases, or diseases associated with a Th1 defect, especially pre-existing infections by feline immune deficiency virus (FIV), feline leukemia virus and corona virus

Vaccine for treating or preventing lentivirus infection in cats, contains nucleic acid sequence encoding viral protein under control of eukaryotic promoter.

Disclosure; Page 29-31; 37pp; German.

This invention describes a novel vaccine (A) for prevention or treatment of lentivirus infection in felines which comprises an immunizing nucleic acid sequence (I) that contains, or comprises, at least part of a gene encoding a protein (II) of the virus, under control of a eukaryotic promoter functional in the relevant animal. (II) is especially the envelope (env) protein. The invention also describes (1) vaccine (A) containing an immunizing protein, or fragment, from a lentivirus plus at least one of interleukin (IL)-12 and/or -16; and (2) preparation of a lentivirus protein, or fragment, especially derived from feline immune deficiency virus (FIV), by expressing the corresponding nucleic acid sequence in a host cell. The products of the invention have antiviral activity. The vaccine (A) and related protein-based vaccines, are particularly used to treat or prevent lentivirus infections in domestic cats, especially feline immune deficiency virus (FIV). Vaccination with (A) allows differentiation between vaccinated and infected animals, from the antibody status. The vaccines may be formulated with an adjuvant (particularly interleukin-12 and/or IL-16) that elicits a cytotoxic immune response, particularly a Th1 response

Recombinant feline interleukin-12, useful as immunostimulant and for treating e.g. viral infections in cats, and related nucleic acid constructs.

Example 1c; Page 33-35; 35pp; German.

This invention describes a novel feline interleukin-12 (fIL-12) polypeptide (I) that is expressed, by recombinant gene expression in eukaryotic or prokaryotic cells, in the form of both polypeptide chains of subunits p35 and p40. These proteins are formed so that, in equimolar concentrations and in presence of an immunizing antigen, they can be administered to carnivores, particularly domestic cats. The invention also describes a nucleic acid construct (II) encoding fIL-12 containing sequences at least 95% identical with the p40- and p35-encoding sequences (A, 990 bp and B, 669 bp respectively), reproduced in the specification, as immunostimulants for immunization against infectious diseases and/or for treating infections or tumors in felines, especially domestic cats. The products of the invention have immunostimulatory, antiviral and antitumor activity. Nucleic acid constructs that encode (II) are useful as adjuvants for prophylactic immunization against viral diseases and for treating diseases associated with a Th1 defect. IL-12 induces synthesis of interferon gamma (Th1 response). The feline interleukin-12 polypeptide is useful for carnivores, and particularly domestic cats in the following: (i) as immunostimulant, for preventative or therapeutic use; and (ii) treating tumors and autoimmune diseases, or diseases associated with a Th1 defect, especially pre-existing infections by feline immune deficiency virus (FIV), feline leukemia virus and corona virus

Novel feline cytokine protein - useful for treating feline auto:immune diseases, e.g. those caused by feline herpes virus or feline calcivirus.

Claim 19; Page 52-54; 94pp; Japanese.

This sequence encodes a novel feline cytokine protein, FLAFp40. This protein can be used in the production of a FLAFp35/FLAFp40 heterodimer which can potentiate the cytotoxic activity of feline cytotoxic T lymphocyte cells. Such proteins are used for treatment of feline autoimmune diseases e.g. as caused by feline herpes virus or feline calcivirus

PT Novel feline cytokine protein - useful for treating feline auto:immune
PT diseases, e.g. those caused by feline herpes virus or feline calcivirus.
XX
PS Claim 20; Page 55; 94pp; Japanese.
XX
CC This sequence encodes a novel feline cytokine mature protein, FLAFp40.
CC This protein can be used in the production of a FLAFp35/FLAFp40
CC heterodimer which can potentiate the cytotoxic activity of feline
CC cytotoxic T lymphocyte cells. Such proteins are used for treatment of
CC feline autoimmune diseases e.g. as caused by feline herpes virus or
CC feline calcivirus

CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

 New nucleic acid molecule comprising a sequence encoding a feline p35 or
 p40 subunit protein and a nucleic acid linker, useful in preparing a
 vaccine against infectious diseases in feline animals.

 Claim 24; SEQ ID NO 38; 103pp; English.

 The present invention relates to the feline interleukin (IL)-12p35 or p40
 subunit protein and their encoding nucleic acid molecules and a nucleic
 acid linker. The invention also provides the feline caspase (casp)-1,
 feline IL-18 single chain and canine IL-12 single chain proteins and
 their nucleic acid molecules. The nucleic acid molecule is useful in
 preparing a vaccine against infectious diseases in feline animals. The
 present sequence is the feline single chain IL-12 protein encoding cDNA.

PT Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single
PT chain and canine IL-12 single chain proteins, useful for treating and

preventing autoimmune diseases, inflammatory diseases and/or graft rejection in animals.

Claim 1; Page 49-50; 106pp; English.

The present invention discloses new feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single chain and canine IL-12 single chain proteins. A composition comprising a feline IL-18, feline caspase-1, feline IL-12 single chain or canine IL-12 single chain proteins, a nucleic acid encoding these proteins, mimetopes of these proteins, multimeric forms of these proteins, an antibody against these proteins, or an inhibitor identified by its ability to inhibit the activity of these proteins, can be used to treat or prevent autoimmune diseases, allergic reactions, infectious diseases, tumour development, inflammatory diseases and/or graft rejection in animals. The present nucleic acid sequence represents a feline interleukin 12 DNA sequence, as described in the invention

CC The present invention relates to the feline interleukin (IL)-12p35 or p40
CC subunit protein and their encoding nucleic acid molecules and a nucleic
CC acid linker. The invention also provides the feline caspase (casp)-1,
CC feline IL-18 single chain and canine IL-12 single chain proteins and
CC their nucleic acid molecules. The nucleic acid molecule is useful in
CC preparing a vaccine against infectious diseases in feline animals. The
CC present sequence is the feline single chain mature IL-12p40 subunit
CC complementary DNA.

Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single chain and canine IL-12 single chain proteins, useful for treating and preventing autoimmune diseases, inflammatory diseases and/or graft rejection in animals.

Claim 6; Page 66-67; 106pp; English.

CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC proteins. A composition comprising a feline IL-18, feline caspase-1,
CC feline IL-12 single chain or canine IL-12 single chain proteins, a
CC nucleic acid encoding these proteins, mimetopes of these proteins,
CC multimeric forms of these proteins, an antibody against these proteins,
CC or an inhibitor identified by its ability to inhibit the activity of
CC these proteins, can be used to treat or prevent autoimmune diseases,
CC allergic reactions, infectious diseases, tumour development, inflammatory
CC diseases and/or graft rejection in animals. The present nucleic acid
CC sequence represents a feline interleukin 12 DNA sequence, as described in
CC the invention

 Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single
 chain and canine IL-12 single chain proteins, useful for treating and
 preventing autoimmune diseases, inflammatory diseases and/or graft
 rejection in animals.

 Claim 6; Page 63-64; 106pp; English.

 The present invention discloses new feline interleukin 18 (IL-18), feline
 caspase-1, feline IL-12 single chain and canine IL-12 single chain
 proteins. A composition comprising a feline IL-18, feline caspase-1,
 feline IL-12 single chain or canine IL-12 single chain proteins, a
 nucleic acid encoding these proteins, mimetopes of these proteins,
 multimeric forms of these proteins, an antibody against these proteins,
 or an inhibitor identified by its ability to inhibit the activity of
 these proteins, can be used to treat or prevent autoimmune diseases,
 allergic reactions, infectious diseases, tumour development, inflammatory
 diseases and/or graft rejection in animals. The present nucleic acid
 sequence represents a feline interleukin 12 DNA sequence, as described in
 the invention

PT   Nucleic acids encoding modified cytokine polypeptides (i.e. modified p40
```

and p35 polypeptides), useful for treating various diseases e.g. diabetic retinopathy and cancer.

Claim 1; Page 137-138; 223pp; English.

The invention relates to nucleic acids encoding modified cytokine polypeptides (i.e. modified p40 and p35 polypeptides). The modified cytokine polypeptides have T-cell proliferative and interferon (IFN)-gamma induction activities. The polypeptides and polynucleotides of the invention are useful for treating various diseases e.g. bacterial infections, AIDS, diabetic retinopathy and cancer. The polypeptide and polynucleotide may also be useful as a vaccine adjuvant, to enhance a vaccinated host's cell-mediated immunity for protective response to a pathogen. The present sequence is a modified human p40 protein encoding DNA

New nucleic acid molecule comprising a sequence encoding a feline p35 or p40 subunit protein and a nucleic acid linker, useful in preparing a vaccine against infectious diseases in feline animals.

Disclosure; SEQ ID NO 54; 103pp; English.

The present invention relates to the feline interleukin (IL)-12p35 or p40 subunit protein and their encoding nucleic acid molecules and a nucleic acid linker. The invention also provides the feline caspase (casp)-1, feline IL-18 single chain and canine IL-12 single chain proteins and their nucleic acid molecules. The nucleic acid molecule is useful in preparing a vaccine against infectious diseases in feline animals. The present sequence is the canine single chain IL-12p40 subunit reverse complementary DNA.

Canine cytokine protein which activates canine cytotoxic T lymphocytes - is useful for treatment of viral and autoimmune diseases in dogs.

Claim 8; Page 32; 51pp; Japanese.

This sequence encodes the canine lymphocyte activation factor (CLAF) of the invention. CLAF activates lymphocytes, especially canine cytotoxic T cells. The protein contains a p35 and a p40 subunit. CLAF or antibodies recognising it may be used in the treatment of viral diseases in dogs (such as canine distemper, canine parvovirus and canine infectious hepatitis). The antibodies may also be used in isolation of CLAF from culture of the transformant host cells by affinity chromatography. The p40 homodimer can be used for the treatment of autoimmune diseases in dogs

New therapeutic and prophylactic agents - comprise genetically-engineered canine interleukin 12, used to treat, e.g. canine and feline immunological diseases.

Claim 1; Page 23-25; 45pp; Japanese.

The present sequence encodes a canine interleukin 12 (IL-12) protein. The IL-12 protein can be used in therapeutic or prophylactic agents. The agents can be used to prevent and treat canine and feline immunological diseases including dog and cat tumours, skin diseases, viral infections and allergic diseases, especially tumours, breast tumour, oesinophilic granuloma, epidermoid tumour, skin tumour, lipoma, othematoma, pneumonoedema, skin soft pedicled soft tumour and anal tumour; skin diseases, otitis externa, dermatitis, eczema, fungal diseases of the skin, pyoderma, allergic dermatitis, nettle rash, traumatic dermatitis and hair loss; infections; dog Parvovirus infection and distemper virus, cat plaque virus infection and feline leukaemia, and allergic diseases, e.g. pollinosis

Large scale production of interleukin-12 for pharmaceutical applications, comprises infecting an insect cell with a recombinant virus containing gene encoding IL-12, and producing IL-12 by carrying out spinner culture of insect cell.

Example; SEQ ID NO 3; 8pp; Japanese.

The invention related to the large scale production of interleukin-12 (IL-12), which involves infecting an insect cell with a recombinant virus containing a gene encoding IL-12, and producing IL-12 by carrying out spinner culture of insect cell. The method is useful for producing IL-12, preferably canine IL-12. IL-12 has pharmaceutical applications. The present sequence encodes canine IL-12 P40, which is used in the exemplification of the present invention.

PT Novel gene vector for expression in insect useful for expression of
PT foreign gene such as dog interleukin 12 gene, comprises two promoters.
XX
PS Claim 4; SEQ ID NO 5; 13pp; Japanese.
XX
CC The invention relates to a novel gene vector for expression in an insect
CC comprising at least two promoters, particularly the polyhedrin promoter
CC and p10 promoter. The vector contains at least two types of foreign
CC protein expression gene and the gene product of the vector is produced
CC using a gene recombinant baculovirus, particularly a recombinant silkworm
CC nuclear polyhedrosis virus. The baculovirus is proliferated in a
CC silkworm. The vector of the invention may be useful for expression of a
CC foreign gene, such as canine interleukin 12. Within the vector, two types
CC of foreign protein expression genes are integrated simultaneously for
CC their simultaneous expression. The current sequence is that of the canine
CC interleukin-12 (IL-12) p40 DNA of the invention.

 Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single
 chain and canine IL-12 single chain proteins, useful for treating and
 preventing autoimmune diseases, inflammatory diseases and/or graft
 rejection in animals.

 Claim 6; Page 83-85; 106pp; English.

 The present invention discloses new feline interleukin 18 (IL-18), feline
 caspase-1, feline IL-12 single chain and canine IL-12 single chain
 proteins. A composition comprising a feline IL-18, feline caspase-1,
 feline IL-12 single chain or canine IL-12 single chain proteins, a
 nucleic acid encoding these proteins, mimetopes of these proteins,
 multimeric forms of these proteins, an antibody against these proteins,
 or an inhibitor identified by its ability to inhibit the activity of
 these proteins, can be used to treat or prevent autoimmune diseases,
 allergic reactions, infectious diseases, tumour development, inflammatory
 diseases and/or graft rejection in animals. The present nucleic acid
 sequence represents a canine interleukin 12 DNA sequence, as described in
 the invention

CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a canine interleukin 12 DNA sequence, as described in
CC   the invention

  New nucleic acid molecule comprising a sequence encoding a feline p35 or
  p40 subunit protein and a nucleic acid linker, useful in preparing a
  vaccine against infectious diseases in feline animals.

  Example 4; SEQ ID NO 68; 103pp; English.

  The present invention relates to the feline interleukin (IL)-12p35 or p40
  subunit protein and their encoding nucleic acid molecules and a nucleic
  acid linker. The invention also provides the feline caspase (casp)-1,
  feline IL-18 single chain and canine IL-12 single chain proteins and
  their nucleic acid molecules. The nucleic acid molecule is useful in
  preparing a vaccine against infectious diseases in feline animals. The
  present sequence is the canine single chain IL-12 complementary DNA.

 Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single
 chain and canine IL-12 single chain proteins, useful for treating and
 preventing autoimmune diseases, inflammatory diseases and/or graft
 rejection in animals.

 Claim 6; Page 79-80; 106pp; English.

 The present invention discloses new feline interleukin 18 (IL-18), feline
 caspase-1, feline IL-12 single chain and canine IL-12 single chain
 proteins. A composition comprising a feline IL-18, feline caspase-1,
 feline IL-12 single chain or canine IL-12 single chain proteins, a
 nucleic acid encoding these proteins, mimetopes of these proteins,
 multimeric forms of these proteins, an antibody against these proteins,
 or an inhibitor identified by its ability to inhibit the activity of
 these proteins, can be used to treat or prevent autoimmune diseases,
 allergic reactions, infectious diseases, tumour development, inflammatory
 diseases and/or graft rejection in animals. The present nucleic acid
 sequence represents a canine interleukin 12 DNA sequence, as described in
 the invention
